

Prashant Ranjan

[E-Mail](#)[LinkedIn](#)[GitHub](#)

Varanasi, IN

PROFESSIONAL SUMMARY

Mathematics & Computing undergraduate with strong interest in AI, machine learning, and real-world intelligent systems. Experienced in building applied ML solutions involving sensor fusion, data-driven decision systems, and predictive modeling. Skilled in Python, data science, and system design, with hands-on experience through competitive programs including Smart India Hackathon (ISRO). Interested in research problems involving AI-driven systems, real-time data processing, and intelligent decision-making.

EDUCATION

Rajiv Gandhi Institute of Petroleum Technology (RGPT)
Bachelor of Technology (B.Tech) in Mathematics & Computing

2024 - 2028
Amethi

EXPERIENCE

Data Science Fellow May 2025 - Jul 2025
[Consulting & Analytics Club, IIT Guwahati](#) Remote

- Selected among the top 10% of 10,000+ global participants in Summer Analytics 2025, a competitive data science and machine learning program.
- Completed rigorous, hands-on training in Python-based data analysis and machine learning, including NumPy, Pandas, scikit-learn, and real-time data processing concepts.
- Built and evaluated multiple ML models (Regression, SVM, Decision Trees, KNN, Neural Networks) on real-world datasets.
- Executed a capstone project involving data preprocessing, feature engineering, and model evaluation using industry-standard metrics (AUC-ROC, confusion matrix).

On-Chain Builder (Batch #18) Jun 2025 - Aug 2025
[BuildGuid](#) Remote

- Selected among 11 builders worldwide via the SpeedRunEthereum qualification track.
- Built and deployed full-stack Web3 dApps (NFTs, staking, AMM DEX, lending) using Solidity, Ethereum, Scaffold-ETH, Hardhat.
- Developed Web3 frontends with React, Next.js, TypeScript and applied smart-contract security best practices.

Web3 Fellowship Jun 2025 - Present
[Dev3Pack](#) Remote

- Built and deployed smart contract-based applications using Solidity and Ethereum.
- Developed full-stack systems using React, Next.js, and TypeScript.

Open Source Contributor & Mentor Jul 2025 - Oct 2025
[GirlScript Summer of Code](#) Remote

- Selected for a structured open-source program focused on collaborative development and mentorship.
- Participated in contributions and guided peers on basic problem-solving and contribution workflows.

Outreach & Digital Marketing Trainee Aug 2024 - Jan 2025
YAPASSIO Hybrid

- Assisted early-stage outreach and digital marketing efforts to support brand visibility and partnerships.
- Engaged with educational institutions and external stakeholders for collaboration and lead generation.

ACHIEVEMENTS

Smart India Hackathon (SIH) 2025 – Winner (PS: SIH25177) | ISRO
Built DRISHTI, an AI-based smartphone navigation & anti-collision system using GPS/NavIC, IMU, ML, and P2P communication.
Dec 2025

Innopreneurs Season 11 – Top 500 Startups (Global) | Lemon Ideas
Recognized for innovation with Volzo Mobility Private Limited
Dec 2024

Startup Showdown – E-Summit'25 | E-Cell IIIT Naya Raipur
Pitched startup ideas; gained exposure to business models and investor evaluation.
Mar 2025

PROJECTS

DRISHTI – Smartphone-Based Anti-Collision System (Smart India Hackathon 2025 Winner – ISRO Problem Statement)

Kotlin, GPS/NavIC, Sensor Fusion (EKF)

- Developed a real-time collision prediction system using sensor fusion (EKF), GPS/NavIC, and IMU data.
- Designed ML-based obstacle detection and risk prediction for road safety.
- Implemented decentralized vehicle communication via Wi-Fi Direct (P2P) without internet dependency.
- Achieved low-latency predictions using on-device sensor data for real-time inference.

Dynamic Pricing Engine for Urban Parking Lots

Python, Machine Learning, AI, Mathematics

- Built ML-driven pricing models using demand, occupancy, and competitor signals.
- Applied feature engineering and predictive modeling to optimize revenue and utilization.
- Designed a data-driven decision system for real-time pricing.

NDVI Land Cover Classification

Python, Machine Learning

- Built a logistic regression model to classify land cover from NDVI data.
- Handled noisy environmental data using preprocessing and evaluation metrics.

Nutrition Health Survey – Age Prediction

Python, Machine Learning, Statistics

- Developed a binary classification model to predict Senior vs Adult from health indicators.
- Applied feature engineering and model evaluation techniques.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL, Java

Machine Learning & Data Science: Supervised Learning (Regression, Classification), Model Evaluation (AUC-ROC, Confusion Matrix), Feature Engineering, Data Preprocessing, Statistical Analysis

Libraries & Tools: NumPy, Pandas, scikit-learn, TensorFlow, OpenCV, Matplotlib

Systems & Applied AI: Sensor Fusion (Extended Kalman Filter), Real-Time Data Processing, On-Device Inference, Data-Driven Decision Systems

Frameworks & Development: Flask, Django, React, Next.js

Other: System Design, Problem Solving, Algorithmic Thinking
