Varanasi, IN

PROFESSIONAL SUMMARY

Mathematics and Computing undergraduate with a strong inclination toward **deep problem-solving, system thinking, and building practical technology**. I enjoy working across **software engineering, AI/ML, and emerging technologies**, often exploring ideas beyond coursework through projects, hackathons, and self-driven learning. Known for **adaptability, curiosity, and persistence**, I thrive in fast-paced environments where learning, experimentation, and impact go hand in hand.

EDUCATION

Rajiv Gandhi Institute of Petroleum Technology (RGIPT) Bachelor of Technology (B.Tech) in Mathematics & Computing	2024 - 2028 Amethi
Maa Bharti Senior Secondary School Senior Secondary Education (Class XII – CBSE)	2020 - 2022 Kota, Rajasthan
Sunbeam Suncity School & Hostel Secondary Education (Class X – CBSE)	2019 - 2020 Varanasi, Uttar Pradesh

EXPERIENCE

Web3 Fellowship Dev3Pack	Jun 2025 - Present Remote
•Selected for a competitive, lifetime Web3 fellowship focused on smart contract and full-stack dApp development. •Completed Dev3Pack x Lisk Solidity Bootcamp, building and integrating Ethereum smart contracts with Web3 frontends. •Gained hands-on experience with modern wallet infrastructure, including Coinbase Smart Wallets and Farcaster developer tooling. •Authored technical content on blockchain architecture and scaling, strengthening system-level understanding.	
On-Chain Builder (Batch #18) BuidlGuidl	Jun 2025 - Aug 2025 Remote
•Selected among 11 builders worldwide via the SpeedRunEthereum qualification track. •Built and deployed full-stack Web3 dApps (NFTs, staking, AMM DEX, lending) using Solidity, Ethereum, Scaffold-ETH, Hardhat. •Developed Web3 frontends with React, Next.js, TypeScript and applied smart-contract security best practices.	
Open Source Contributor & Mentor GirlScript Summer of Code 2025	Jul 2025 - Oct 2025 Remote
•Selected for a structured open-source program focused on collaborative development and mentorship. •Participated in contributions and guided peers on basic problem-solving and contribution workflows.	
Data Science Fellow Consulting & Analytics Club, IIT Guwahati	May 2025 - Jul 2025 Remote
•Selected among the top 10% of 10,000+ global participants in Summer Analytics 2025, a competitive data science and machine learning program. •Completed rigorous, hands-on training in Python-based data analysis and machine learning, including NumPy, Pandas, scikit-learn, and real-time data processing concepts. •Designed, trained, and evaluated machine learning models such as Regression, SVM, Decision Trees, KNN, Naive Bayes, and Neural Networks. •Executed a capstone project involving data preprocessing, feature engineering, and model evaluation using industry-standard metrics (AUC-ROC, confusion matrix).	
Outreach & Digital Marketing Trainee YAPASSIO	Aug 2024 - Jan 2025 Hybrid
•Assisted early-stage outreach and digital marketing efforts to support brand visibility and partnerships. •Engaged with educational institutions and external stakeholders for collaboration and lead generation.	

PROJECTS

DRISHTI – Smartphone-Based Anti-Collision System
Kotlin, GPS/NavIC, Sensor Fusion (EKF)

- Built a smartphone-based ADAS solution using on-device sensors for real-time collision prediction.
- Implemented cooperative vehicle awareness via Wi-Fi Direct P2P communication without internet dependency.
- Integrated AI-based obstacle detection and sensor fusion to deliver low-cost, scalable road safety.

Dynamic Pricing Engine for Urban Parking Lots

Python, Machine Learning, AI, Mathematics

- Built a real-time pricing system optimizing parking revenue and utilization.
- Implemented multi-tier models: occupancy-based, demand-based, and competitor-aware pricing.
- Applied mathematical modeling, feature engineering, and ML-driven decision logic.

Over-Collateralized Lending Protocol (DeFi)

Solidity, Ethereum, TypeScript, Node.js

- Developed a decentralized lending platform with ETH collateral and liquidation logic.
- Implemented over-collateralization safeguards to prevent bad debt.
- Deployed and tested smart contracts on Ethereum testnets.

Decentralized Exchange (AMM)

Solidity, Ethereum, TypeScript, Blockchain

- Built an AMM-based DEX supporting ETH–ERC20 swaps and liquidity provisioning.
- Implemented permissionless trading and real-time on-chain event tracking.

Token Vendor dApp (ERC-20 Exchange)

Solidity, Ethereum, Next.js, TypeScript

- Built an ERC-20 token vending machine using Scaffold-ETH.
- Enabled token buy/sell flows with smart contract event tracking.
- Deployed contracts on Sepolia and frontend on Vercel.

Rigged Roll Dice (Smart Contract)

Solidity, Ethereum, Next.js

- Exploited predictable on-chain randomness to guarantee winning outcomes.
- Demonstrated risks of insecure randomness in smart contracts.
- Deployed and verified contracts on Sepolia.

Decentralized Staking Application

Solidity, Ethereum, React, Next.js

- Built a trustless ETH staking dApp with deadline-based refund logic.
- Ensured funds are automatically released or refunded based on conditions.

NFT Minting dApp

Solidity, Ethereum, Next.js, React

- Developed an NFT minting dApp with wallet-based interaction.
- Compiled, deployed, and interacted with NFT smart contracts.

NDVI Land Cover Classification

Python, Machine Learning

- Built a logistic regression model to classify land cover from NDVI data.
- Handled noisy environmental data using preprocessing and evaluation metrics.

Nutrition Health Survey – Age Prediction

Python, Machine Learning, Statistics

- Developed a binary classification model to predict Senior vs Adult from health indicators.
- Applied feature engineering and model evaluation techniques.

Mobile & Utility Applications

Flutter, Dart

- TipCalcPro**: Mobile app for tip calculation and bill splitting.
- Cookie of Fate**: Flutter app generating random fortunes with animated UI.

Mini Projects – Web & Programming Fundamentals

HTML, CSS, JavaScript, Python

- Built multiple small applications including a drawing app, **BMI Calculator**, **Scientific Calculator**,
- Rock, Paper, Scissors CLI game**, **Drawing Application** and **Google Pay Web SDK integration**.
- Strengthened fundamentals in UI development, logic design, and API integration.

ACHIEVEMENTS

Smart India Hackathon (SIH) 2025 – Winner (PS: SIH25177) ISRO Built DRISHTI, an AI-based smartphone navigation & anti-collision system using GPS/NavIC, IMU, ML, and P2P communication.	Dec 2025
Innopreneurs Season 11 – Top 500 Startups (Global) Lemon Ideas Recognized for innovation with Volzo Mobility Private Limited	Dec 2024
Startup Showdown – E-Summit’25 E-Cell IIIT Naya Raipur Pitched startup ideas; gained exposure to business models and investor evaluation.	Mar 2025

TECHNICAL SKILLS

Languages: C++, C, TypeScript, Dart, Solidity, SQL, CSS, Swift, C#, Java, Python, JavaScript

Frameworks: React.js, Node.js, Next.js, Flask, Django, Flutter

Libraries: pandas, NumPy, Matplotlib, TensorFlow, scikit-learn, OpenCV
